

## OCS Analytics — your Tier-2 report, put to work

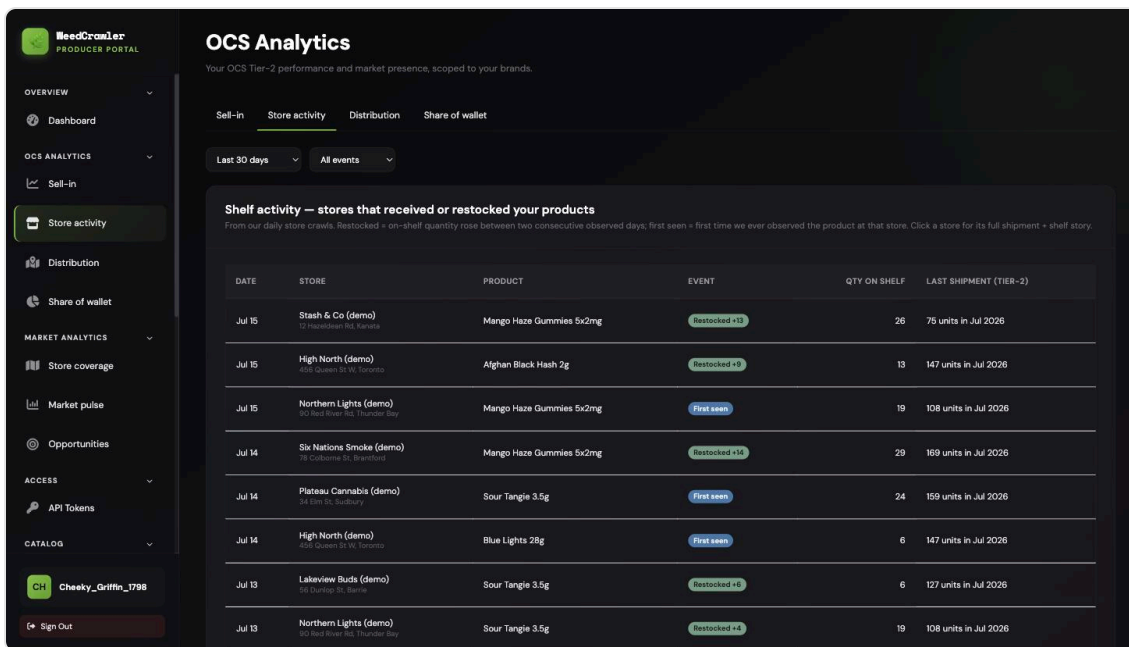

Every month, a Tier-2 report waits for you in the OCS Power BI portal: every order, every SKU, every store. Most producers never take it past the export screen. **Extract it, send it to us, and it becomes four interactive dashboards** in the WeedCrawler producer portal — the regulator's real numbers, not estimates.

All views are scoped to your brands only. All screenshots below show sample data.

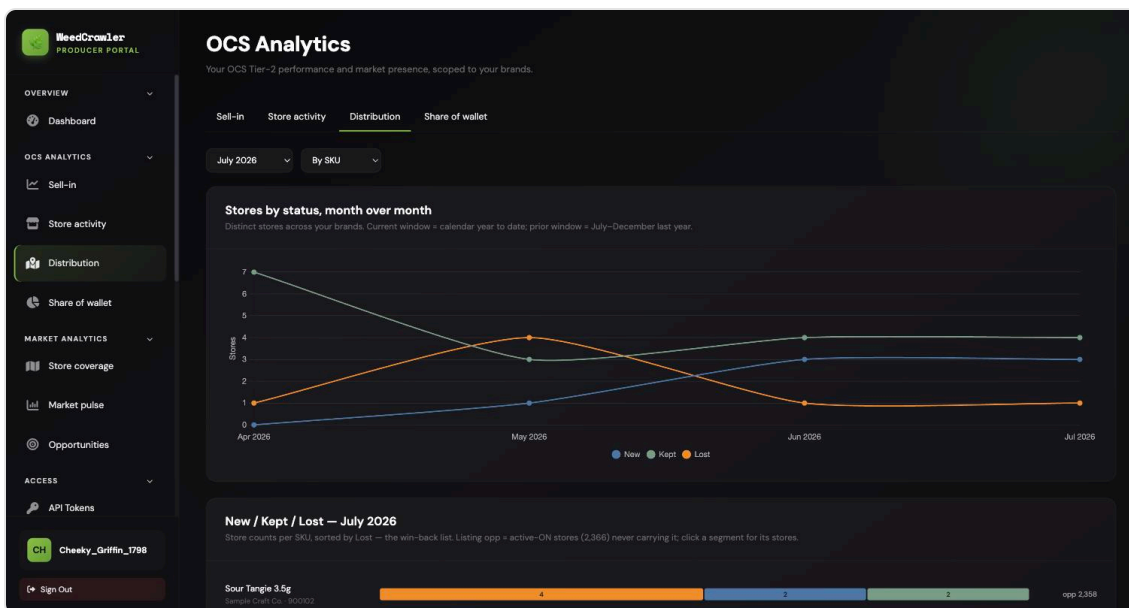

### 1 • Sell-in explorer

Your monthly OCS orders as a living chart. Click any month and get the SKU leaderboard behind it — units, distinct stores, month-over-month change — then drill into the exact stores ordering each SKU. Filter by brand, sub-category, or period.

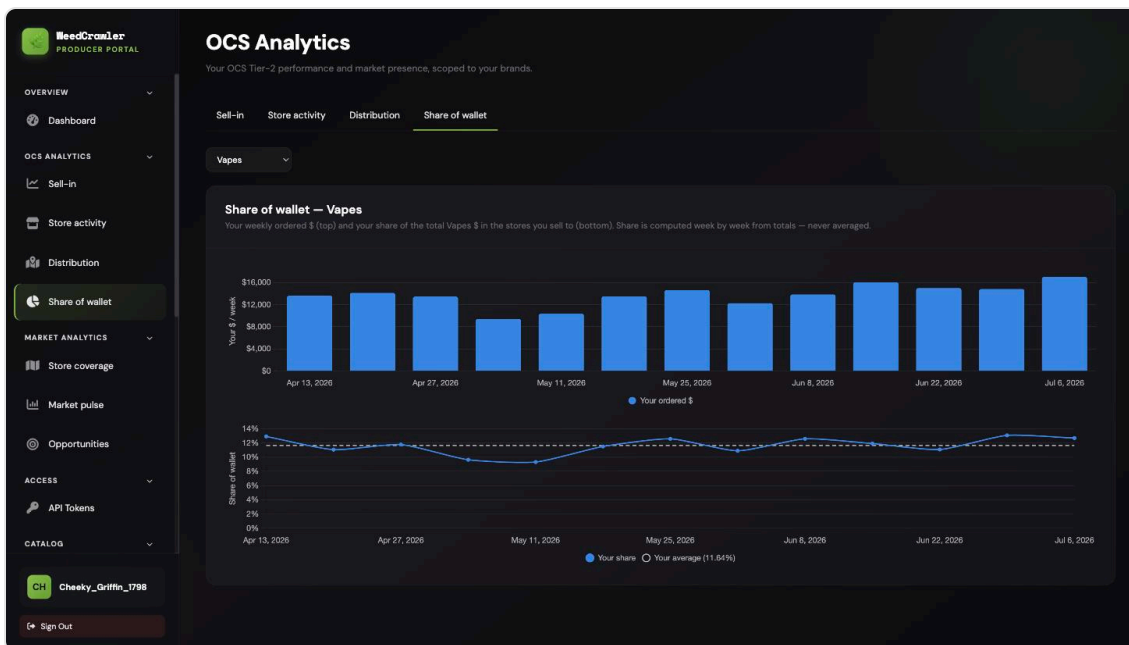

## 2 · Store activity

A live feed of stores that received or restocked your products, from our daily shelf crawls — **blended with your Tier-2 shipments**, so you see the order and the shelf in one line. Click a store for its full shipment-and-shelf story.

## 3 · Distribution — New / Kept / Lost

For each SKU: which stores are new this period, which stayed, and which dropped you — sorted by Lost, because that's your win-back list. The “opp” count shows how many active Ontario stores have never carried it. Click any segment for the store list.

## 4 · Share of wallet

In the stores that order from you: what share of their sub-category dollars is yours, week by week, against your own running average. Computed from totals, never averaged — the honest version of the number.

### How it works

1. Export your monthly Tier-2 report from the OCS Power BI portal and send it to us — as-is, no editing.
2. Sell-in and Distribution unlock on the next ingest, typically within a business day.
3. Store activity and Share of wallet are part of the paid tier — currently free for a month for beta partners.

**Book 15 minutes — see it with your data**

Best,

**Alex**
